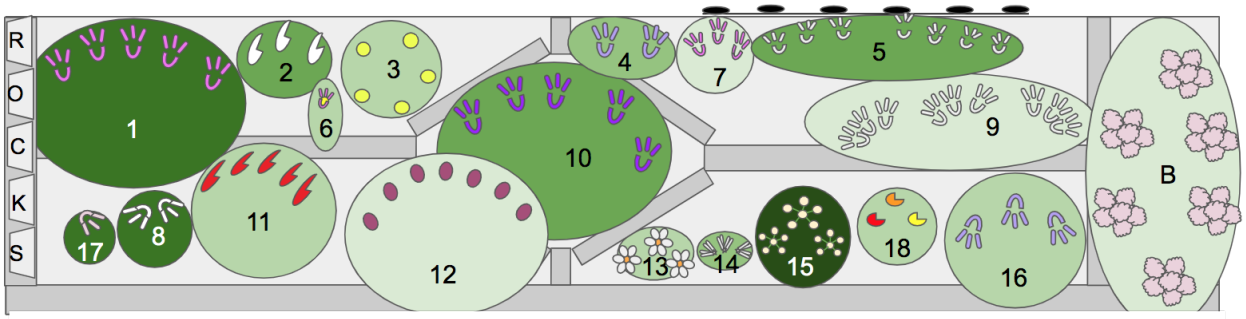
HERB GARDEN



An herb garden is a grouping of valuable plants that meet the gardeners various needs. Whether a collection of culinary, medicinal, tea, or potpourri herbs, they generally need a sunny location with well-drained soil.
Herbs are not heavy feeders unless they are growing in containers. Harvest herbs frequently so the plant will keep producing new leaves and promote bushier growth. When harvesting, take only about a third of the plant at one time. At the end of the season, herbs can be dried or frozen to enjoy throughout the winter.

1. African Blue Basil, *Ocimum kilimandscharicum ×basilicum*
2. Golden Garden Sage, *Salvia officinalis* 'icterina'
3. Garlic Chive, Allium schoenoprasum
